## Skills

### FrontEnd Development
- React Native
- Flutter
- Kotlin native
- Jetpack Compose
- Swift (UiKit, SwiftUI)
- React JS, Next JS (Web Platform)

### BackEnd Development
- Node Js (Express JS, Nest JS)
- Golang
- Kotlin SpringBoot
- Firebase (middleware)

### UI/UX Design
- Adobe Photoshop
  (Image Editing)
- Adobe XD & Figma
  (Wireframing, Prototyping)

## Profile

An enthusiastic engineer with highly motivated and profound eagerness in learning something new, especially in Mobile-app based Information Technology-related working environment. Excessive dedication in team play, relationship building, and communication. Profound experiences in developing apps using multiple stacks, mostly using React Native framework for produce a mobile apps.

## Education

**Bachelor Degree (S.Kom) in Computer Science**
Binus International University - Dec 2019

**High School Diploma in Science**
SMA Korpri Bekasi - Aug 2012

## Organizational Experience

**Chairman of BMS (Binusian Moslem Society)**
Binus International University - Jan 2014-Dec 2014

## Working Experience

**Mobile Engineer**
Transnovasi (PT. Transnovasi Bangun Persada)
Nov 2023 ~ Current

**Mobile Engineer**
PINA (PT. Pina Aplikasi Bersama)
May 2022 ~ Nov 2023

**Junior Mobile Developer**
PT. Tataskola Teknologi Indonesia
Nov 2021 ~ Apr 2022

**Android Developer**
PT. TKD (Teknologi Kupon Digital)
Oct 2020 ~ Oct 2021

## Workshop / Short Courses

**Fullstack Dev & Mobile (React Native, ExpressJS)**
Arkademy Tech Education Platform - 2020

**Startup Weekend Jakarta 4**
Startup Weekend Jakarta | Techstars - November 2019

## Language

**Bahasa Indonesia**
Native Speaker

**English**
Fluent (TOEIC Score 790)

**日本語 (Japanese)**
Basic (JLPT N5)

**한국어 (Korean)**
Basic (TOPIK I Level 2)

## Interest

Music

Swimming

Watching Movies

## Kupon Makan App

(PT. TKD, Mobile App Project)

A server-side webview app then compiled as android app. The main idea of this project was creating a mobile app that works as enabler aimed for the people affected by the pandemic. Kupon Makan app simplify a donating system inthe form of coupons. Those coupons can be exchanged into food/groceries through the food vendor (warung/groceries). Then, the coupon's money will be saved to warung/gorceries account through Koop App as financial services app.

My contributions for this project create and upgrade screens ( coupon message, warung detail, donators, etc.) adding loading layer, bottom tabs navigation, maps configuration and some minor changes.

## Koop App

(PT. TKD, Mobile App Project)

**Koop**

This Mobile was a digital solution to help savings and loan cooperative activities through a mobile application. Make it easy for cooperative members to carry out all activities such as applying for savings accounts, accommodating loan accounts, transferring money between member and to member's bank account.

A task was given to overhaul, renovate, provided from the expected UI/UX. The task consist of: framework changes, design adjustments, and the addition of screens. All the work from embedding the APIs and finishing the screen design took 2 Months to complete. Until the end of the working period, the latest release is still in the internal testing stage. and in terms of design is sufficient to meet what was expected as planned.

Technologies used :

WebView → React Native

## Tataskola App

(PT. Tataskola Teknologi Indonesia, Mobile App Project)

This projects was intended to help school administration to handle school-based payment by online transactions and monitors its log through web app. Then, this project was broaded into the path of implementing a mobile app for guardian to do online & remote transaction through the mobile app.

A task assigned to build the app from scratch by the design given from product team through figma. Then, the pipeline was well prepared to get automation on its deploy to Google Play. By the time when last update made, the app has fulfill the design requirement while waiting its API to be Integrated.

## PINA Wealth Management App
(PT.Pina Aplikasi Bersama, Mobile App Project)

GET IT ON Google Play

Download on the App Store

**PINA app** is a comprehensive wealth management solution that offers personalized finance advisory, net worth tracking, financial goal management, and investment options in stocks and mutual funds. Through its intuitive interface, users can easily oversee their financial health and make informed investment choices.

In this case, since January 2022, the application has been established as a financial management application in general. As a result, new hired engineers concentrate solely on building new features. In April 2023, the team decided to produce a new version of the application with a more user-friendly and simple design.

Several features were built and maintained while working at this company, including:
- **Authentication** with single sign-on (Google, and Apple ID)
- **Onboarding** flow to the home screen
- **Financial advisory**, booking appointments
- small changes to numerous components
- and still counting.

Technology used:

React Native
